Confidential. Prepared for APSCO in response to its request for proposal. Prices exclude VAT.

1. EXECUTIVE SUMMARY

APSCO runs 700 to 1,000 people across business units, depots and shifts. Saudi and non-Saudi staff sit under different rules, and field teams do not sit at a desk. Bayzat covers all eight areas in your request on one platform, in Arabic and English, on web and mobile.

We propose the **Premium bundle** of the Bayzat HR Platform, priced per employee per month, with Bayzat Studio Advanced and a Bayzat's highest service package. The points that matter most for APSCO:

- **Saudi compliance is built into payroll.** GOSI, Mudad and Muqeem are live native integrations. WPS file generation (including custom SIF) and end-of-service calculation are part of Bayzat Payroll. Saudization and Nitaqat have a dedicated report.
- **Field and shift staff are covered.** Bayzat Attendance checks staff in by GPS or facial recognition on the mobile app, with geo-fencing, or through your biometric devices, and detects lateness, absence and overtime automatically.
- **180° and 360° performance management is included in the Premium bundle.** Unlike other providers, it is not a paid add-on. Hiring Management (ATS) is available as an optional module.
- **Hosted in Dammam.** Customer data is hosted on Google Cloud in Dammam, Saudi Arabia. Bayzat holds ISO/IEC 27001:2022 and SOC 2 Type II certifications and is PDPL compliant.
- **Oracle JD Edwards integration is a path we have taken before, at no additional fee.** We confirm the exact approach with your IT team in a technical session.

2. ABOUT BAYZAT

Bayzat has built HR, payroll and benefits technology for the Region since 2012, with offices in Saudi Arabia, the UAE and Jordan and more than 300 people. Over 4,000 companies and 250,000 employees across KSA and the GCC run on Bayzat. Our Customer Success team is based in the Kingdom, and our regional leadership sits in Riyadh.

3. COMPLIANCE WITH YOUR REQUIREMENTS

Each requirement from your request, with its status. "Included" means part of the Premium bundle quoted in the price proposals.

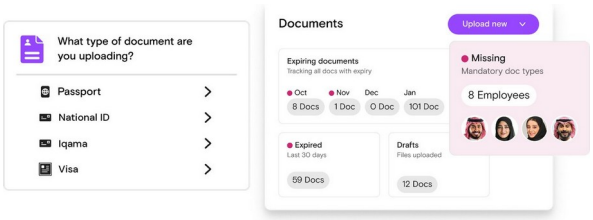

#	Requirement	Bayzat response	Status
1	Core HR, organization structure, employee records (Arabic / English)	Full Arabic interface alongside English. Employee records with OCR profile creation, custom fields, asset management, a document vault for contracts, IDs, iqamas, visas and CR, expiry reminders, letter requests and custom requests with approval workflows. Multiple branches and locations in one platform.	Included
2	Payroll: GOSI, EOSB, WPS	Bayzat Payroll calculates GOSI contributions, end-of-service benefits, overtime, bonuses and deductions. WPS file generation is part of the platform, including custom SIF. Employee loans, salary advance, air ticket requests and employee expenses run inside payroll.	Included
3	Government integrations: Qiwa, Mudad, GOSI, Muqeem	GOSI, Mudad and Muqeem are live native integrations. WPS generation is embedded. Qiwa is not open to platform integration today. Bayzat is ready to build a native Qiwa integration as soon as Qiwa opens. See Section 4.3.	GOSI, Mudad, Muqeem: live native Qiwa: ready when Qiwa opens

#	Requirement	Bayzat response	Status
4	Time and attendance, shifts, overtime, leave	Bayzat Attendance (GPS, facial recognition, geo-fencing, biometric device sync, kiosk mode), attendance regularisation, timesheets, shift scheduling across locations, automatic overtime detection, and Bayzat Leave with Saudi Labor Law entitlements. All sync to payroll.	Included
5	Employee and manager self-service (web and mobile)	Employees and managers request, approve and track leave, letters, documents and tasks on the Bayzat app (mobile) and on the web.	Included
6	Recruitment, onboarding, performance management	Performance management with 180° and 360° reviews is included. Onboarding and offboarding journeys are included. Hiring Management (ATS) is an optional module, priced to APSCO's hiring needs and discussed during the demo.	Performance and onboarding: included ATS: optional
7	Saudization / Nitaqat tracking and reporting	A dedicated Saudization and Nitaqat report built for Bayzat Payroll and Core HR data.	Included
8	ERP integration: Oracle JD Edwards payroll GL posting	Delivered before. Bayzat Studio Advanced brings API integrations and webhooks. The approach and mapping are confirmed with APSCO's IT team. See Section 4.7.	Included, no additional fee

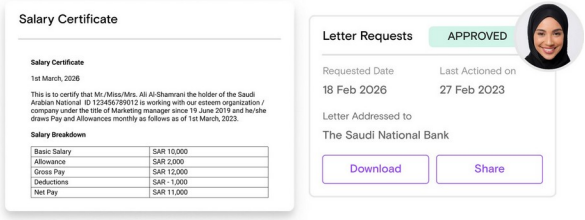

4. PLATFORM OVERVIEW

4.1 Core HR and employee records

Bayzat gives HR one record per employee, in Arabic or English. Upload an ID, iqama or contract and Bayzat reads it to create the profile. Contracts, IDs, iqamas, visas and CR documents live in one vault, and admins get a reminder before anything expires. Employees request salary and experience letters from the app. Templates fill themselves from the record and route to the signing authority.

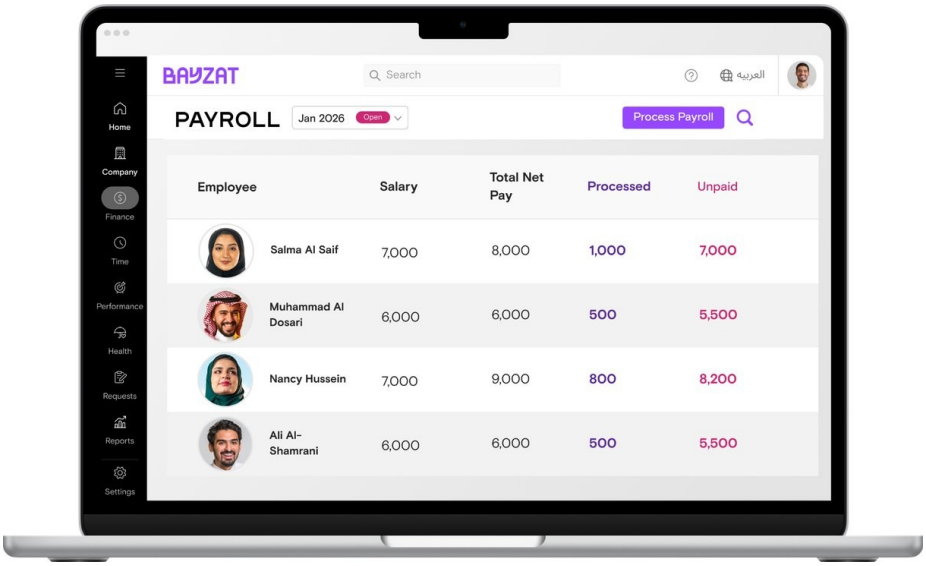

Document vault: IDs, iqamas, visas and contracts, with expiry tracking

Letter requests: requested in the app, approved and generated from the record

4.2 Payroll

Bayzat Payroll is built for Saudi Labor Law. It calculates GOSI, overtime, bonuses, deductions and end-of-service benefits, generates the WPS file (custom SIF supported), and pays through Mudad. Unpaid leave and attendance flow into payroll without re-entry. Salary advances and loans are requested in the app and deducted in payroll. Air ticket requests and employee expenses are approved in the app and paid through payroll. Payroll cycles are configurable.

Bayzat Payroll: the monthly run, with net pay and processing status per employee

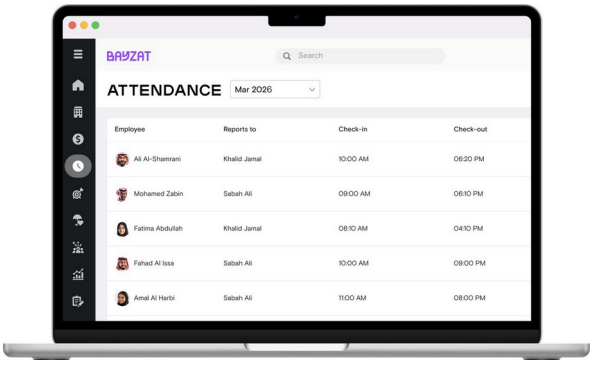

4.3 Government integrations

Integration	Status	What it does
GOSI	Live, native	GOSI contributions calculated in payroll.
Mudad	Live, native	Salary payments through Mudad from payroll.
Muqeem	Live, native	Iqama tracking and expiry alerts for non-Saudi staff.
WPS	Built into the platform	WPS file generation, including custom SIF.
Qiwa (contract authentication)	Ready to integrate once Qiwa opens	Qiwa is not open to integration with any platform today. Bayzat will build the native integration as soon as it is available.

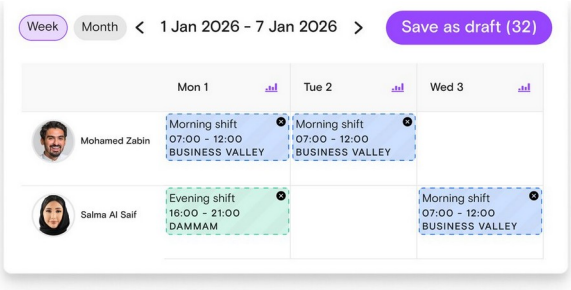

Nitaqat and Saudization. A custom report tracks the Saudi and non-Saudi mix across your business units and locations from live employee records.

4.4 Time and attendance, shifts, overtime and leave

- **Check-in your way.** Staff check in from the Bayzat app using GPS or facial recognition, inside geo-fenced locations. Depots and sites with biometric devices sync through our biometric integration.
- **Shifts across locations.** Build schedules in draft, approve and publish. Duplicate, mass-assign or delete shifts in bulk. Split shifts, part-time work and multiple sites are supported.
- **Overtime, lateness and absence** are detected automatically and flow to payroll.
- **Bayzat Leave** applies Saudi Labor Law entitlements, shows overlapping leave so teams keep coverage, and syncs unpaid leave to payroll.

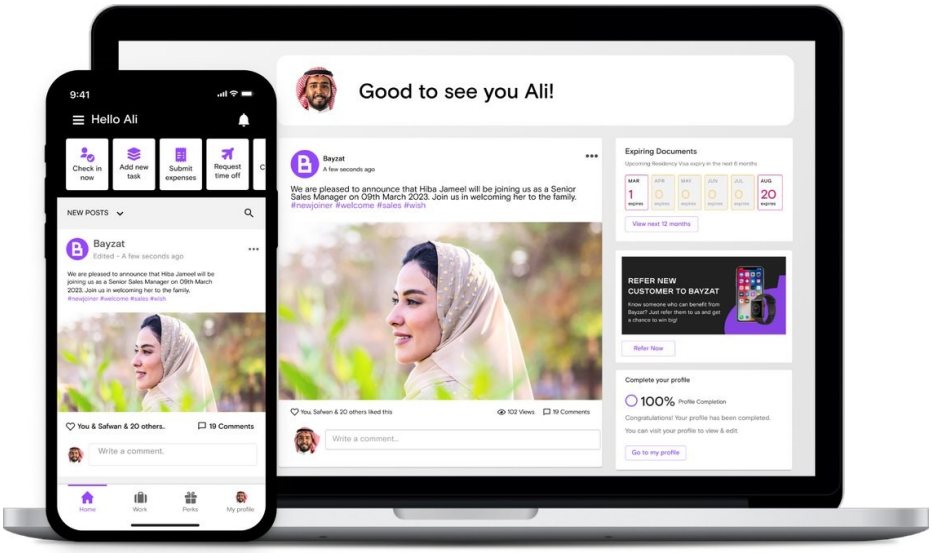

Bayzat Attendance: check-in and check-out across branches

Shift scheduler: plan, draft and publish shifts by location

4.5 Employee and manager self-service

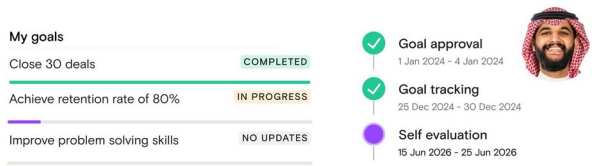

Everything above is available on the Bayzat app and on the web. Managers approve leave, attendance adjustments and requests from their phone. Bayzat Service Desk (part of Bayzat Studio) handles custom requests such as salary certificates and travel approvals with their own approval paths.

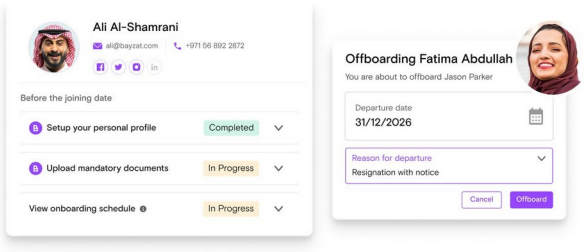

The Bayzat app and web: self-service for every employee and manager

4.6 Performance, onboarding and recruitment

- **Performance management, 180° and 360°, is included in the Premium bundle.** Goals and KPIs, 360° reviews with feedback from managers, peers and employees, recurring 1:1 catch-ups, and performance analytics.
- **Onboarding and offboarding** journeys assign tasks such as document collection, visa processing and IT setup, and employees complete their part from the app.
- **Hiring Management (ATS) is optional.** AI CV screening and ranking, one-way video interviews, custom hiring flows with automated follow-ups and e-signed offers, and branded career pages. Pricing depends on APSCO's hiring needs and is discussed during the demo.

Goals and reviews for 180° and 360° performance cycles

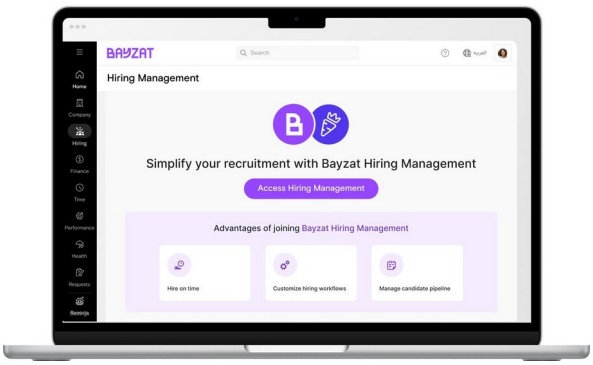

Onboarding and offboarding journeys with tracked tasks

4.7 Oracle JD Edwards integration

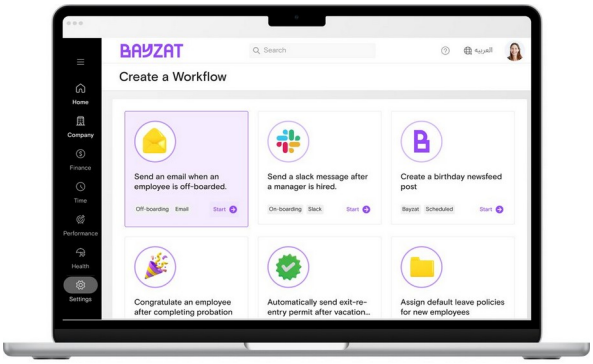

Bayzat has integrated with Oracle JD Edwards before. Bayzat Studio Advanced includes API integrations (100+ APIs) and webhooks. The posting method, GL account mapping and timing depend on your JD Edwards setup, so we hold a technical session with your IT team early in the project and confirm the scope in writing from that session. **The JD Edwards integration carries no additional fee.**

4.8 Bayzat Studio Advanced

Bayzat Studio is included in every offer in the price proposals. Bayzat Workflows launch automatically from events such as new hires, salary changes and leave requests. Bayzat Service Desk tracks employee requests. Task Manager assigns and follows work across teams. Bayzat Apps lets your team describe a process in plain words and have Bayzat build the app.

Hiring Management (ATS), available as an optional module

Bayzat Workflows: automate HR processes from ready-made templates

5. IMPLEMENTATION, MIGRATION AND TRAINING

APSCO's implementation runs in two stages, each with a named owner at Bayzat. A dedicated Implementation Specialist collects your documents and configures your account. A dedicated Customer Success Manager then leads training, employee activation and adoption. Data migration, configuration and training are all covered by the one-time implementation fee.

Docs collection	Account configuration	Training	Monitoring	Sustained platform usage
Data accuracy Time taken to provide documents	Platform configured and ready to use	Module-specific admin training Employee training and activation	Minimum usage threshold per module High-touch engagement with your Customer Success Manager	Module adoption Platform expansion Platform renewal

How each step of the journey is measured.

5.1 Stage 1: Account configuration

Phase	What happens	Timeline
1. Documentation meeting	Your dedicated Implementation Specialist meets your team to understand APSCO's policies and explain every documentation requirement.	1–2 days
2. Document collection	APSCO completes the Bayzat onboarding sheet, with support from the Implementation Specialist whenever needed.	Depends on APSCO
3. Document review	The Implementation Specialist reviews every document for accuracy before configuration starts.	1–3 days
4. Account configuration	Bayzat configures your account from the documents provided and the features in your bundle, and migrates your employee data.	8–10 days, depending on employee numbers and documents

5.2 Stage 2: Training and adoption

Phase	What happens	Timeline
1. Feature training	You and all relevant stakeholders get a training link to live sessions on every feature you subscribe to, in Arabic and English.	4–7 days (depends on APSCO)
2. Employee activation	Your dedicated Customer Success Manager works with you to roll Bayzat out to every employee.	2–3 days
3. Account adoption	Your Customer Success Manager stays in regular contact until every subscribed feature is active.	Depends on APSCO
4. Sustained usage	Regular check-ins on new features and any help you need to get the most out of Bayzat.	Ongoing

Timeline. Bayzat-led phases add up to about 16 to 25 days, plus the time APSCO needs to complete the onboarding sheet. The Oracle JD Edwards integration runs alongside these stages, on a timeline agreed in the technical session with your IT team.

What we need from APSCO: a project lead in HR, a payroll and finance contact, an IT contact for JD Edwards and biometric devices, and the completed Bayzat onboarding sheet.

Training is part of implementation and continues after go-live through your support package (Section 8).

7. DATA HOSTING, SECURITY AND PDPL

APSCO's customer data is stored on Google Cloud Platform in **Dammam, Saudi Arabia**. Bayzat is **PDPL compliant**.

Area	What Bayzat does
Certifications	ISO/IEC 27001:2022 and SOC 2 Type II, independently verified by AssuranceLab.
Encryption	Data encrypted in transit and at rest. Databases are encrypted, so stored data is unreadable without the keys.
Access control	Role-based access. Two-factor authentication is available. Only the technical and customer success teams can reach customer data, and only when needed.
Audit logs	Permanent access logs for logins and any action that changes data. Configuration and login logs are kept for 2 years.
Testing	Annual penetration tests by external specialists.

Area	What Bayzat does
Backup and recovery	Point-in-time recovery for the last 30 days.
Availability	99.9% platform uptime. A 24/7 on-call Site Reliability Engineering team responds to incidents.

Certificates and the IT infrastructure questionnaire are available to APSCO's IT and security team on request.

8. SLA, SUPPORT MODEL AND ACCOUNT MANAGEMENT

8.1 Support channels

On top of direct access to your Customer Success Manager, APSCO's team reaches Bayzat support by phone, WhatsApp, email (support@bayzat.com) or live chat. The help icon inside the Bayzat platform opens the support hub, and the Customer Success team is based in KSA.

8.2 Service package

Every APSCO offer includes a Bayzat service package, matched to your headcount:

	Gold (700 employees)	Gold (850 and 1,001 employees)
Support response	Multi-channel support, 2-hour response during working hours	Multi-channel support, 30-minute response, plus 1:1 sessions
Success Manager	Remote Success Manager: 24-hour response, 3 trainings, monthly check-ins	In-market Success Manager: 24-hour response, unlimited training and strategy sessions
Technical specialist	Dedicated tech specialist and 3 platform configurations per year	Dedicated tech specialist and unlimited configurations
Quality and releases	Live and recorded webinars, self-help, product roadmap and feature insights	Unlimited QA, webinars and new feature implementation, product roadmap and feature insights

8.3 Service level agreement

Every incident is classified by severity, and Bayzat responds within these targets:

Severity level	Description	Target response
1. Outage	SaaS server down	Within 10 minutes
2. Critical	High risk of server downtime	Within 10 minutes
3. Urgent	End-user impact initiated	Within 10 minutes
4. Important	Potential for performance impact if not addressed	Within 10 minutes
5. Monitor	Issue addressed but potentially impactful in the future	Within one business day
6. Informational	Inquiry for information	Within 48 hours

Support hours and channels.

Support type	Details
Dedicated Customer Success Manager	Available Sunday to Friday, 9am to 6pm
Customer support live chat	Available Sunday to Friday, 9am to 6pm, with a response time of under 15 minutes
Email support team	Dedicated email support with a response time of 24 to 48 hours, weekends included
New feature release training	Regular communication and training sessions whenever new features are introduced
Refresher training courses	Live training sessions (Sunday to Friday) on all core Bayzat features

Availability. 99.9% platform uptime, with a 24/7 on-call Site Reliability Engineering team responding to incidents.

8.4 Account management

APSCO has a named owner at every stage. A dedicated Implementation Specialist runs account configuration. A dedicated Customer Success Manager leads training and adoption and stays APSCO's day-to-day contact after go-live. Mohammad Bibars, Senior Commercial Technology Manager, leads the commercial relationship, the demo and any questions on this proposal.

9. REFERENCES

Two Saudi client references of similar size are available. We share the names and contacts once pricing and requirements are approved.

10. DEMO AND NEXT STEPS

We would be glad to run a live demo after you review this proposal. Mohammad Bibars presents it and answers any questions on scope, integrations or pricing. Reach out any time to schedule.
